

TELECOR PARTNERS WITH QUINTUM TECHNOLOGIES TO PROVIDE VoIP SOLUTION TO CUSTOMERS

Bundled Solution Includes Tenor® VoIP MultiPath Switch and VS1 PBX Phone System

Mississauga, Ontario and Eatontown, New Jersey, -- October 15, 2002 – Telecor today announced the establishment of an alliance with Eatontown-based Quintum Technologies, a worldwide vendor of voice-over-IP technologies. Under terms of the agreement, Quintum is providing Tenor® VoIP switch products for the Telecor VS1 PBX system, and the Telecor factory is certifying the interoperability of the interface with Quintum’s Tenor® product line.

Quintum’s Tenor product line is noted for providing high quality voice communications and a risk-free migration path for VoIP solutions. The Quintum Tenor addresses the main concerns customers have with deploying VoIP. The Tenor’s unique MultiPath™ architecture makes it the easiest solution to install in the industry. Its patented SelectNet™ feature assures voice quality by monitoring the QoS of every call and transparently switching calls to the PSTN in real time whenever the IP network cannot support a high quality voice call. Combine this with Telecor’s full-featured VS1 PBX system, and Telecor dealers have a solution that combines two superior products which they can offer to their customers.

“Telecor is excited about this new alliance with Quintum,” stated Peter Jova, President of Telecor, Inc. “In the past 10 months, there has been more pressure on our VS1 dealers to provide a VoIP solution. The Tenor product will allow our dealers to compete in the VoIP world without having to make a huge investment. Our confidence in the integration is also leading us to install the product to connect our headquarters in Mississauga, Ontario to our offices in Chicago, Niagara Falls and the UK.”

“Telecor will be a great partner,” commented Chuck Rutledge, VP Marketing of Quintum Technologies. “The Telecor VS1 PBX addresses a very important segment of the market with a full-featured system, and Quintum is very pleased to be the VoIP solution for Telecor customers.”

About Telecor

Telecor is an international provider of quality communication products and systems. Telecor offers complete process manufacturing-- from the concept and design stages, through procurement, assembly, to in-circuit testing. Telecor is a privately held Canadian corporation, with its head office and manufacturing facilities located in Canada.
